

Teacher of the Python programming Club

For the last five years, we have been developing feature-ready education, teaching people the XXI century skills, and setting the trend for the education market. We were the first in Russia who has hacked the scaling, quickly entered the international market (110 countries) and 1.1 million plus graduates. Having maintained the quality of our product. But this is still not enough for us.

We are rushing on and looking for a real Python explorer to join the team) a Sensei, a teacher, someone who wants to do things inviting good karma — to teach children! Helping them to develop, find the growth points, overcome difficulties, and prove that they can do more!

What you need to know about us:

1. We are the smart rebels in the Edtech world, we generate crazy ideas and can implement them.
2. We have our own educational + video platform + Learning Management System = gun-power product!
3. Our quality, like love — is absolute.
4. We appreciate organized work, but people and their interaction are more important.
5. We are not afraid to make mistakes — after falling, we get up and win.
6. We work a lot, but we don't spend money on useless things.
7. We accept the unique nature of everyone, can support each other, and vividly relax together.

What you will have to do:

1. Create a cool, driving environment that you and your students would rush to every day. Set the mood!
2. Teach and inspire. The groups are small, up to 12 students.
 - We have our own platform where the kids post their projects, vote, communicate, write their own applications and games. You will also be interested.
 - The tasks are already selected in a super-professional manner. Your task is to motivate, guide, and help if something does not work out.
3. Provide feedback for parents on their children's successes, difficulties, and so on. Not every day but 4-5 times during a course.

And what you exactly will not do:

1. Write methodological guidelines and lesson plans — everything is already done. You shall read it before the lesson and go ahead, lighting up the hearts!
2. Spend time checking homework. We simply don't have them.
3. Messing around with paperwork — no reports and unnecessary bureaucracy.
4. Check out "simple" tasks — an auto-check is provided. There are also tasks for creating code and making projects at the end of the course. Here you will face pure creativity: you help the children to discover their ideas, overcome difficulties, and make a product they will be proud to present. Emotions and wow effects can not be conveyed!

What skills are required?

1. Know Python. If you are great with something else — it's marvelous! We have a wide range of courses and can connect you to several of them.
2. Love to teaching. This may not be a skill, but it is a super important condition.
3. Be able to explain complex things in simple words.
4. Experience of working with children aged 14-17 — no way without it.

What we offer from our side

1. A cool team of young, vibrant pros! A team to hang out together and to learn from.
2. Training not only at the beginning but also during the process.
3. The support, love, and help of our tutors.
4. About money — 6,000 frs per hour.
5. We will provide you with workload. We are growing at a cosmic speed and ready to give you as many groups as you can teach without straining :)

6. About remote work. You choose the schedule on your own: on weekdays we start from 16:00, and on weekends from 14:00...

Well, your eyes lit up, and your heart is pounding: Algorithmics?

Don't wait — send us your CV) Let's create cool education together!
